THE DEVIL IS IN THE DETAILS

<p><b>COURSE DESCRIPTION</b>          This full day course will present the latest cutting edge advances in surgery of the wrist and elbow. It will include the various management options for distal radius fractures, carpal instabilities, Scaphoid fractures and DRUJ instability. An in depth discussion of salvage procedures will also be covered when things go wrong. The role of arthroscopy for distal radius and carpal injuries will be discussed as well as some new cutting edge procedures for elbow osteoarthritis and fractures. The final session will illustrate some clever reconstructive options to salvage an otherwise bad outcome following surgery.</p> <p><b>OBJECTIVES:</b>          Upon completion of this course, the participant will:</p> <ul style="list-style-type: none"> <li>• Understand the indications and complications of volar plating for distal radius fractures.</li> <li>• Discuss the role of tendon graft reconstruction for chronic scapholunate dissociation and DRUJ instability.</li> <li>• Know the indications and contraindications for arthroscopic-aided reduction and internal fixation of elbow fractures.</li> <li>• Describe treatment alternatives for elbow OA</li> </ul>		8:45–9:00 am	<b>Nonbridging External Fixation</b> <i>David J.
