## Digital File Specifications

### FILE FORMATS:

Preferred format is PDF/Acrobat 4.05 or later, set for compatibility with PDF version 1.3 (Acrobat 4).

All high-resolution images and fonts must be included. All images must conform to the following minimum resolution specifications: grayscale and color images: 300 dpi; combination grayscale and color images: 500-900 dpi; line art (bitmap) images: 900-1200 dpi. Do not nest EPS files.

### PAGE LAYOUT:

Supply as single page files only, right reading, portrait mode, 100% size, no rotation. Created to the trim of the magazine, plus a minimum 0.125" bleed on all sides. Keep live matter 0.5" from trim edges. Crop marks and SWOP color bars must be included, position 0.5" outside trim. Reverse type should be no less than 6pt. Fine lettering (thin lines, serifs) should be restricted to one color. All fonts and graphics must be embedded or included with the files and conform to the file formats listed above.

### PROOFS:

Proofs must be produced from the final file submitted. All proofs must conform to SWOP standards. For a list of current SWOP-approved proofs, visit [www.swop.org/certification/certmfg.asp](http://www.swop.org/certification/certmfg.asp), and click on "Certified Systems & Ads." Desktop inkjet printer proofs do not meet SWOP standards. AMC Media Group cannot guarantee color match unless acceptable proof is provided.

### DISPOSITION OF MATERIAL:

Reproduction material will be held one year from last insertion.

**Today's Top Story**

**Study Measures Risk of Subsequent Arthroplasties in TKA and THA Patients with Osteoarthritis**

Patients who undergo total knee arthroplasty (TKA) or total hip arthroplasty (THA) for osteoarthritis (OA) may be more likely to undergo further arthroplasties in the future, according to a study published online in *Clinical Orthopaedics and Related Research*. The Osteoarthritis Initiative project was used to collect data on 332 primary TKA patients and 132 THA patients who underwent surgery for OA. Mean follow-up was four years. After eight years, the cumulative incidence of contralateral TKA after the index TKA was 40 percent, and the incidence of any THA after TKA was 13 percent. The cumulative contralateral THA incidence after index THA was 8 percent, and the incidence of any TKA after THA was 32 percent. Contralateral TKA risk factors included younger age and loss of medial joint space width with a varus deformity.
