

## ***Position Statement***

# **Use of Global Service Data**

*This Position Statement was developed as an educational tool based on the opinion of the authors. It is not a product of a systematic review. Readers are encouraged to consider the information presented and reach their own conclusions.*

While the members of the American Association of Orthopaedic Surgeons (AAOS) are primarily concerned with quality orthopaedic care, they are also critically concerned about accurate coding and reimbursement. The *Complete Global Service Data for Orthopaedic Surgery*, an annual publication of the American Academy of Orthopaedic Surgeons, is intended to be used to determine correct billing and reimbursement of musculoskeletal procedures.

***The American Association of Orthopaedic Surgeons believes the Complete Global Service Data for Orthopaedic Surgery and all authorized orthopaedic subspecialty publications should be considered to be the definitive coding source(s) for the bundling of orthopaedic surgical procedures because the information contained in the Complete Global Service Data for Orthopaedic Surgery and authorized orthopaedic subspecialty publications is compiled and edited exclusively by orthopaedic surgeons.***

The AAOS *Complete Global Service Data for Orthopaedic Surgery* is not intended to present a standard of care or a practice parameter. Additional services may be required which are not listed.

The *Complete Global Service Data for Orthopaedic Surgery* shows the relationship between CPT™ musculoskeletal codes, including annual updates on new codes and annual review of existing code packages. All information included in this book is compiled by AAOS and is based on the deliberations of the orthopaedic surgeons who are experts in orthopaedic coding and members of the AAOS Coding, Coverage and Reimbursement Committee.
