General Information

Description
The program is designed to identify areas of recent research in the field of hip surgery relevant to practicing physicians, surgeons, and allied health professionals. This information will be delivered through scientific paper presentations, hot topic updates, case-based and video-based discussions, current concepts overview and special spotlight sessions.

Target Audience
The intended audience is orthopaedic surgeons, physicians, fellows, residents, and allied health professionals in the field of hip surgery or related fields of practice.

Course Objectives
- Review basic science and orthopaedic problems relative to the hip joint.
- Examine the indications, techniques, and results of various surgical procedures.
- Describe the management of hip arthroplasty related problems and complications.
- Gain further understanding in the areas of quality, economics and value as related to the US healthcare.
